

### Description:

SAVI Notes are a nichless underwater LED lighting system for pools and spas. The SAVI Note requires an M4 Controller which manages the color changing ability of the SAVI Note. The SAVI Note fits into a standard 1.5" wall fitting of a pool for easy design installation. They are ETL approved for mounting 4" below water level, which makes them ideal for swimouts, beach entries, sun shelves and other shallow water applications. Create a variety of effects and a myriad of colors with these small but powerful lights.

The M4 controller is used to control the color changing ability of the SAVI Note(s). One M4 can control up to 4 SAVI Notes. The standard M4 can be connected to a wall switch, Aqua Link or any pool control. Toggle the power to the M4 controller to change color modes. The Stand-Alone M4 comes with 9 standard color modes. The DMX version comes with 8 pre-programmed color modes and comes with software for custom programming.
